How to Measure

Always use a metal tape measure for accuracy and double check your measurements.

Width

Measure the width of your existing track. If you don't have a track, measure the window frame width and allow enough space at each side for the curtains to clear the window, we recommend 15cm each side. For example if the window is 130cm wide add 40cm (20cm each side) to give a track width of 170cm.

Drop (Length)

Measure from the top of the curtain track to where you want your curtain to finish. If you don't have an existing track then measure from the top edge of the window frame to the lower edge of the window frame. You will then need to choose from our readymade drops of 160cm, 205cm, 220cm or 240cm and install your track accordingly. Where possible we recommend installing your track at least 10cm above the window frame.

If you require any assistance measuring please contact us on 0800 Curtains (0800 287 824) or email us enquiries@curtainstudio.co.nz
